

Back to Fun

Back to Life

The **Heal iD** smartphone app transforms Covid-19 isolation and lockdowns into full restaurants and fun gatherings!

SAFE.
SIMPLE.
SECURE.

Heal iD

Heal ID is a global, borderless, privacy-preserving platform. With a simple, device-to-device QR-code anybody can verify whether a party's counterpart is sufficiently immune or not.

The Power of Decentralized Technology

Heal iD is the safe way to go back to concerts, movies, sports events, rallies, presentations, and any kind of social gathering.

A scan of a Heal ID barcode lets anybody check anybody else's functional immunity status, without revealing identities. It works with the standard and certifier of your choice – even your own!

➤ Private

Encrypted, private, and without need for tracing, or trusting middlemen.

➤ Flexible

Adjusts to new tests, standards, and scientific findings, including your own.

➤ Easy to use

Point and look, not even requiring a click.

➤ Empowering

Leaves the individual in charge, sharing your data only with your consent.

➤ Inclusive

Protects anyone, anywhere, including high-risk people and your community

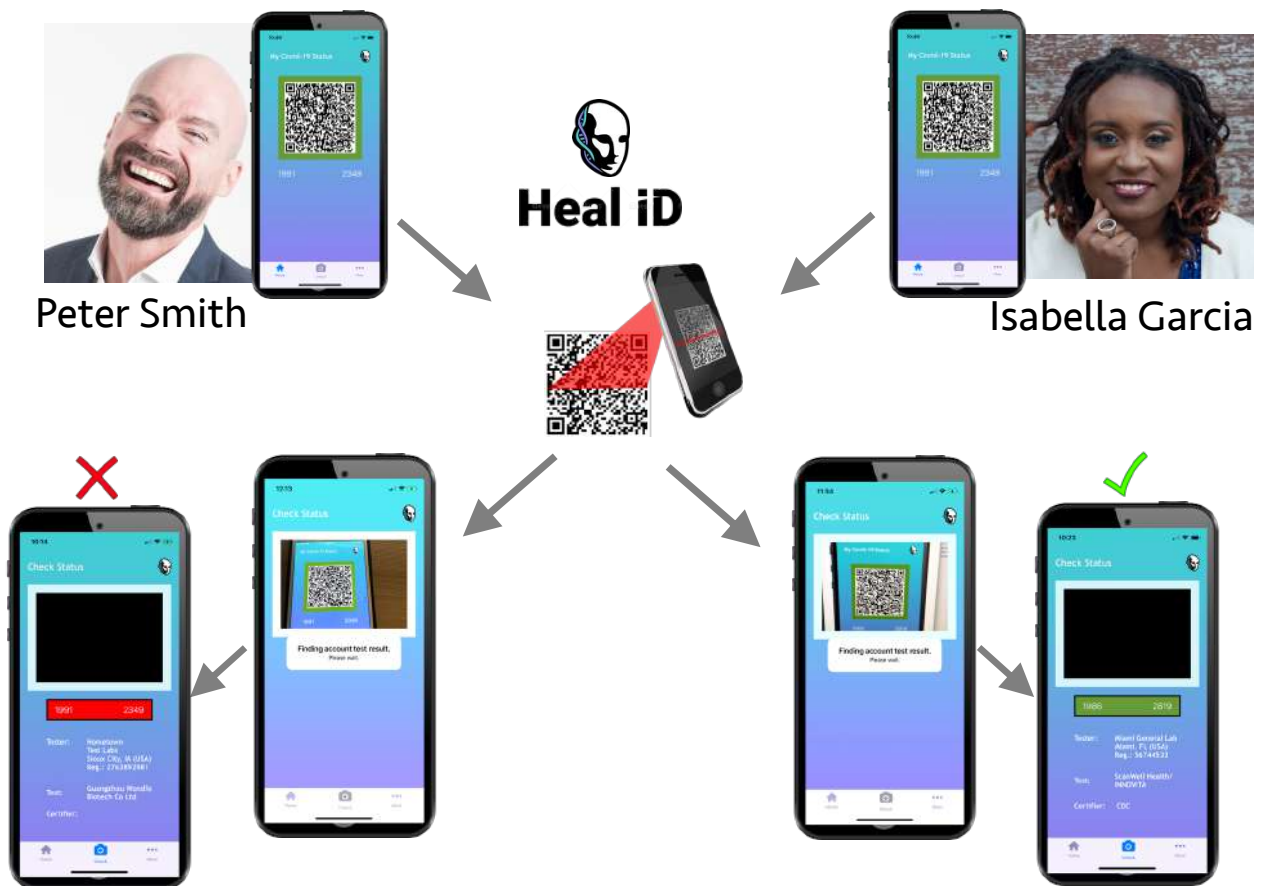

Only Smartphone Required!

- No infrastructure investment
- No interfaces

Know & Verify

- When going to movies, performances, or presentations.
- When attending or participating in sports and social activities.
- When getting together with people at concerts, rallies, or events.

Although Peter was tested, test results are not up to the event's standards. He will have to continue social distancing, but **he can gather with functionally immune others.**

Isabella's scan reflects acceptable test results suggesting likely functional immunity. She is free to participate in any event or gathering.
